

Aravind Kumar Reddy Kadiyala

Tadipatri, Andhra Pradesh aravindnatraj466@gmail.com 6302702443 [LinkedIn](#) [GitHub](#)

Professional Summary

AI/ML Engineer specializing in LLMOps and real-time AI systems. Proficient in LangGraph, RAG pipelines, and vector search. Builds deployable, end-to-end ML solutions using FastAPI, Docker, and transformer models, from data ingestion through production deployment.

Education

Rajiv Gandhi University of Knowledge and Technologies – RK Valley 2023 – Present
B.Tech in Computer Science Engineering CGPA: **9.01/10**

Rajiv Gandhi University of Knowledge and Technologies – RK Valley 2021 – 2023
Pre-University Course (Class XI–XII) CGPA: **9.87/10**

Technical Skills

Programming: Python, Java, C, SQL

Machine Learning & AI: Machine Learning, Deep Learning, NLP, Transformers, Scikit-learn, RAG, Prompt Engineering

LLM Frameworks: LangChain, LangGraph, Hugging Face, Ollama

Backend & Tools: FastAPI, Flask, Streamlit, , Git, REST APIs

Data & Databases: Pandas, NumPy, Vector Databases

Projects

Janatha Garage — E-Waste Management Platform

- Developed a scalable MERN-based platform with JWT-secured authentication and RBAC, supporting Citizens, Collectors, and Admin workflows.
- Engineered REST APIs for end-to-end waste management including scheduling, live tracking, and administrative control.
- Designed a transaction-safe eco-reward system using atomic MongoDB operations to ensure data integrity and consistency. *Tech: React, Node.js, Express, MongoDB, JWT*

GynoFusion: Multimodal Deep Learning Diagnostic System

- Developed a multimodal AI system integrating structured clinical data and ultrasound imaging for gynecological condition prediction using an ensemble of DNN, CNN, and CNN-LSTM models.
- Designed a hybrid fusion pipeline combining deep learning predictions with YOLOv8-based image detection, achieving 99.11% accuracy and 100% recall (zero false negatives).
- Implemented end-to-end ML pipeline with SMOTEENN preprocessing, model ensembling, and SHAP-based explainability; deployed via Flask with REST APIs and OCR-based medical report extraction. *Stack: Python, TensorFlow, Scikit-learn, YOLOv8, Flask, OpenCV*

AI Resume Generator

- Built a full-stack web app automating resume creation, ATS analysis, and optimization using a locally hosted LLM - zero external API dependency, full data privacy.
- Multi-layered parsing pipeline (pdfplumber, PyMuPDF, Tesseract OCR) with fallback logic achieving approx. 100% parse success across PDF, DOCX, and scanned documents.
- Dual-engine PDF generator (LaTeX + HTML/xhtml2pdf) with 3 templates; Supabase PostgreSQL with Row-Level Security for auth and resume history. *Stack: Python, LLM, Supabase, LaTeX*

Achievements

- Organized university-level hackathons including Aadhya at RGUKT RK Valley.
- Built and deployed AI/LLM-based applications using RAG, LangChain, Ollama, and Streamlit.
- Solved 200+ Data Structures and Algorithms problems across coding platforms.
